[1] Lunervikk is a famous avowed Wright "from over a century ago", according to Contract III's translation of Met-oosa's words. Assume "century" means one hundred Artonan years.

[2] An Artonan year is roughly fifteen earth months, so one hundred Artonan years is roughly 125 earth years.

[3] Joe claims, "We haven't blown anything up too badly in my lifetime."

[4] Joe sat on the committee that put the Hot Lab Coat in the Wardrobe "decades ago"; that was likely a desirable position he could not have gained without some clout, so he's probably at least 60.

[5] Joe summoned humans before he was conspicuously tattooed, when he had "just earned the right to summon Avowed". Summoning rights are typically first gained around 28 earth-years of age (ch 70; see further notes on Stu's projected summoning rights in 2045). It's unlikely Joe was born more than 40 years before Contract Earth was formed.

[6] Ch. 88's mention of a volcanic eruption in Bali during 1963 matches up to the eruption of Mt. Agung in our timeline. However, it does not nail the date down with much precision, as the Agung eruption was a multiple-stage event spread out from initial activity on Feb 18 to a final eruption on May 16. While there were lava flows Feb 24-Mar 16 and they did reach populated areas, they were not the fast-moving torrent of flame Alden described seeing in museums; most deaths were caused by pockets of hot gas flowing from the volcano. Regardless, Tan-wyk's intervention must have happened during the twenty day period of active lava flows, likely in the latter half as enough damage had already been done to the area to justify staying to help rebuild for the following year.

[7] Neha's selection age is not explicitly given in ch. 111, but she's listed alongside early outlier selectees.

[8] "When [Aulia] was my age she'd already had her first child [Corin].'' – Hazel, at age 17 (ch 121). Aulia stopped going to school at age 15 (ch. 110), so was likely selected at 15. She was one of the original Avowed, so probably selected around 1964.

~1980 CE	Aulia contracts with Horatio, S-Healer. [Ch 112]
~1999 CE	Aimi Velra born. [Ch 22] Jessica Velra born. [Ch 109]
~2000 CE	Gorgon imprisoned in Chicago. [Ch 6]

~2017 CE	Stu-art'h born. [Ch 38, 70, 107][11] Manon first summoned to LeafSong ~Aug. [Ch. 27, 101][12]
~2015-2022 CE	Tailor Environment skill popularized by a TV personality. [Ch 32]
~2023 CE	Connie leaves home. [Ch 65] Joe begins working on Moon Thegund. [Ch 28]
2023 CE	Hazel Dinah Velra born 2/23/2023. [Ch 111][13] Roman Velra born ~Oct. [Ch 111, 112][14] Max born ~Dec. [Ch 94] Jeremy Levi born ~Dec. [Ch 64]
2024 CE	Alexei Roberts born 2/18/2024. [Ch 94] Samuel Alden Thorn born 3/25/2024. [Ch 94]
2025 CE	Lute Stellan Velra born 1/22/2025. [Ch 111] Haoyu Zhang-Demir born ~Feb-Mar.[15]
~2025 CE	Leah and Connie's parents die. [Ch 65] Manon buys a 15-year timer. [Ch 101]

---

[9] Approximate birthdate according to 7/6/23 Patreon Q&A. Partial quote: "Hannah would have be in in her mid-thirties now at least. I've been picturing her about 35."

[10] Alden's initial estimate [ch 26] is that Manon is about 50 years old. We know from ch. 101 she is at least 50. She affixed "thirty-something years ago" [ch 32], so 2000 at earliest. Assume she affixed when 15-17 years old, so 2007 at latest.

[11] Alis says in ch. 38 that Alden is younger than Stuart; assume she means developmental age, not chronological age. Stu says in ch. 70 that he started college early. If Artonan college starts at roughly the same maturity level as human college, with students most commonly 18 years old at entrance, this suggests Stu is equivalent to a 17-year-old human when met.

A sixteen-earth-years-old Artonan is developmentally similar to a twelve-year-old human (ch. 107). I assume this ratio holds constant through all stages of youth and young adulthood, at least.

[12] Manon has been working the LeafSong admissions week for 23 years, according to a boater. The admissions week happens once per Artonan year or every 15 months, placing her original summons closer to 22.5 years ago.

[13] Hazel's 14th birthday party was on 2/23/2037. The chance the party is on a different day than her actual birthday is low, as this falls on a Monday.

[14] Roman is eight months younger than Hazel (ch 112). Hazel was born 2/23/23 (ch 111).

[15] From Sleyca's comments rather than the story itself; not yet established in text.

Partial quote from Sleyca (in Patreon comments section here on ch. 120):

"Haoyu doesn't have an official birthday yet even though he deserves one more than most, but I have him being a month or two younger than Lute in my head."

~2029 CE	Kivb-ee born. [46, 107][16] Lute overhears an argument. Ch. 109-114 flashback begins.
~2030 CE	Maricel's lola cured of dementia. Ch. 93 flashback begins.
2031-2 CE	Leah Thorn hired as a consecrated nurse at a House of Healing. Thorns move from Nashville to Chicago. Thorns visit zoo. [Ch 83] Ch. 18 flashback.
Feb 2032 CE	Lute switches from piano to harp. [Ch 109]
~Aug 2032 CE	Sophie first summoned to LeafSong. [Ch 26][17]
~2032 CE	Boe buys a Bedlam Beldam poster. [Ch 5] Boe sees a ewtwee. [Ch 88]
Oct 2032 CE	Body Drainer incident. [Ch 2] [18] Leah and Richard Thorn killed. Ch. 1.
Late 2032 CE	Hannah visits Alden. Connie, 25 years old, becomes Alden's guardian. [Ch 2, 65] Ch. 2.
1/9/2034 CE	Lute goes to school. [Ch 110]
~2034-2037 CE	People in Thegund's chaos zone offered free relocation. [Ch 54] Elepta Agricultural Community abandoned. [Ch 29]
~2035 CE	Sina-art'h dies. [59, 107][19] Ch. 59 flashback.
Late spring/early summer 2035 CE	Alden calls Hannah. Ch. 3, 4.
Summer 2035 CE	Alden visits Anesidora.
Fall 2035 CE	Alden Thorn and Boe Lupescu meet in 6th grade homeroom. Ch. 83 flashback.
2/23/2037 CE	Hazel's (first) coming-of-age party. [Ch 110]

[16] Alden provides multiple estimates of Kibby's effective age. I used the estimate in ch. 46 that she is equivalent to an eight-year-old, as it comes later and is probably based on more complete knowledge. Apply age conversion factor from ch. 107.
[17] Sophie has been working the LeafSong admissions week for about 7 earth years. The admissions week happens once per Artonan year or every 15 months, placing her original summons closer to 7.5 years ago.
[18] Hannah says in ch. 2 that the club Body Drainer hit was having an early Halloween party, placing the month as October with high confidence.
[19] Assume Stu is age 17 equivalent when met. Assume Stu is age 13 equivalent in flashback. Apply age conversion factor.

Summer 2037 CE	Hannah speculates that Alden has high chaos potential. [Ch 6]
Feb-July 2038 CE	Aulia Velra re-elected. [Ch 82, 111][20]
Fall 2038 CE	Alden Thorn and Jeremy Levi meet in 9th grade. [Ch 5]

~June-Nov 2039 CE	Chaos levels on Thegund begin a rapid rise. [Ch 30]
Oct 2039 CE	Alden posts a pic of perfect pigeons, then ghosts his socials. [Ch 124]
Selection - 88 days **F 11/11 or 18/39 CE**	Hazel Velra selected. [Ch 12[23], 23]
~Dec 2039-Jan 40 CE	Lab crew on Thegund request evacuation. [Ch 30] Yipalck employees evacuated; Joe loyalists left behind.
Early 2040 CE	Alden feeds a receptionist. Ch. 5-7.
~Selection- 5-14	Andrzej selected. [Ch 15]
Selection -5 or -12 **Sa 2/4 or 2/11**	Connie goes to California with Tiger Shorts. Alden makes eye contact. Ch. 8-9.[24]

[20] Aulia was re-elected in 2038 before July 19 (ch 111). Aulia lost her council seat, most likely due to losing an election (but possibly via other proceedings), in 2040 while Alden was off-world, so Feb or later (ch 82). Elections are likely held during Feb-July.

[21] Kibby is implied to have gotten her magic lessons when she was about seven, based on Alden's musings. Assuming he means developmental age seven, and comparing against her developmental age when met of about eight, that puts the date ~2038-2039.

[22] Joe's lab was confiscated "several lunar months" before he met Alden (ch 28). It's unclear which moon he is referring to or how long its month is; it may be Thegund, with months approx. 60 days long. This statement offers little solid information.

However, it's reasonable to assume that whatever month Joe is referring to is at least a few times larger than a week, or he'd likely use weeks as the unit. Choose four Earth months as the lower bound, as an earth month is roughly equal to 4 Earth weeks or 2.5 Artonan weeks.

Additionally, we know this is Joe's first year back teaching again, both from his own statements ("I haven't taught in three decades," ch 26) and from Sophie's ("This professor is unknown to me," ch 26). We can then reasonably assume his lab was confiscated less than one Artonan year ago, as teaching is part of Joe's sentence.

[23] Affixation timer is exactly 90 days.

Selection -4 or -11	Alden donates blood.
Su 2/5 or 2/12	Alden explores dietary veganism.

	Alden and Hazel trade.
	Hazel Velra affixes Chainer.
	Ch. 19-24.
Su sel+3	10 AM: Alden Thorn affixes Rabbit.[28]

---

[24] These events are described in ch. 8 as "ten days until the funeral", but take place on the same day as consulate wordchain class, which is established as happening on weekends. Additionally, this is confirmed to be a Saturday in the opening lines of ch. 10. As the funeral is also on a Saturday, this must actually be 7 or 14 days prior to the funeral. Furthermore, this is in February (ch. 8), which may further restrict the date once Sleyca does an edit pass that affects calendar dates early in the story (see footnote on funeral for further information).

[25] The Gloss was almost certainly cast Thursday, but may have happened before or after Alden's selection. In ch. 21, on Saturday, Aimi says it was cast "two days ago". In ch. 22, Keiko says that B Chainer appeared in class trades from Chicago "just after" the Gloss was set; as Alden obtained Chainer about 16 hours after selection, this suggests the Gloss may have happened after his selection.

However, the Gloss more likely happened first. Andrzej had been selected with Chainer the week before, prior to the Gloss cast, but was unwilling to sell to the Velras and possibly afraid to even let his uncle know he held Chainer, lest his uncle strongarm him into affixing it himself. After a week, during the Gloss, Andrzej manages to get to the consulate and try trading, and there sits the perfect class for him the *very minute* he logs on.

Meanwhile, Alden was selected about six to eight months early according to Gorgon, the most knowledgeable available source on the subject (ch. 13), at exactly the right time to get Meister of Cudgel. He walked out of a "no child unaccounted for" school through a conveniently propped-open door without any adults noticing (ch. 12). He was awake at an odd hour, adequately prepared to trade, and online without B74's (or the Velras') competition when Andrzej's B Chainer trade offer appeared on the exchange – and holding nearly the exact thing asked in turn. He then had enough time to research Chainer and decide to contact the Velras before he made his scheduled visit to Anesidora the following day, completing the delivery in the nick of time.

[26] Ch. 15 calls this Saturday in the opening sentence. It's the day after Alden was selected on Thursday, so it's actually Friday. Also, Boe skips school to hang out with Alden in chapter 16, so this must be a school day.

[27] Hannah's funeral is noted to be on her birthday, 2/13, in chapter 5. Tracking the events in the story reveals this is a Saturday.

However, Sleyca decided at a later date that the starting year of the main story (ch. 5 onwards) was 2040. 2/13 does not fall on Saturday in 2040. In cases of conflict throughout the timeline, I give stated day of the week precedence over stated date as "Thursday vs. Saturday" usually has a greater influence on human behavior than "May 11 vs. May 13." This is the reason for the doubled dates throughout the SELECTION, SUMMON, and CHAOS segments of the timeline.

Full quote from Sleyca (in Patreon comments section here on ch. 99):

"It's officially 2040 moving forward. I was fuzzy on the precise year and not anticipating anyone to care enough to check me on it (you are dedicated!) until a few months ago, when I started mapping at Anesidoran holidays and Stuart's phone calls. I picked the 2040 calendar, which should match everything from the LeafSong arc forward. I do need to go back and fix some dates in the early story."

Chaos+27 **3/25 [ch 94]** **Chaos+31 or +24**	Day 28. Alden's birthday. Late 1st day on Thegund. Ch. 46.

[28] Alden passed out for sixteen hours and woke up at 2 AM.

[29] This day begins on the "fifth morning" of Alden's stay at LeafSong, so properly speaking it should be Summons+5A or Day 6. However, the following day is assigned the moniker Day 6 in ch 37. Call this Day 5 and move on.

[30] An Artonan day is approximately 26 hours long. During the Summons segment, while Alden is on an Artonan schedule, I note times like "+9A" to indicate nine *Artonan* days after summoning, and "+10E" to indicate ten earth days after summoning.

[31] Interpret "several months" as ~150 earth days.

[32] Ch. 62 says the funeral happened "a couple months" (~60 days) after Alden's disappearance, but Jeremy says Boe punched his wall "a few months ago" (~90 days ago) a week and a half after the funeral "right before summer break" (prob. May or June).

[33] From stated days and lighting conditions, it appears that Thegund has a day-cycle roughly 60 earth days long. Everything after the collapse of Contract Thegund is more or less consistent with 30 days of light alternating with 30 days of darkness. However, this does *not* match the fact that it was apparently day on Thegund when Alden first traveled there. This may be author error and/or artistic license.

[34] Alden spent three wakeful periods, two full sleeps, and unknown fraction of a third sleep between the lab blowing up and the start of his run. This includes time pacing outside the crater, hoping for rescue. His first sleep was 10-11 hours long according to Kibby, who appears to have excellent time sense, so these "days" may be longer than 24 hours. Call it three days from explosion to run.

[35] Length of run approximated by noting that Alis did three shifts of triforming over the course of the run. Once her strikes disturbed the sand, but were silent; once they were audible; once Alden was so close he was running through dust clouds, during the final leg of the journey when he felt no pain. Alden thought he had not been running a full day when he first noticed the vibrations. Alis was at the start of her day when Alden arrived. The length of the run was probably about three full Artonan days.

[36] Stu's calls come about thirteen earth days apart [ch. 70] because an Artonan week is approximately that long. Stu can only call Alden when he's home on the weekends and can enlist his sister's help. The call on Nov. 6 is noted in ch. 89 to be Stu's 5th call, so the dates of earlier calls can be deduced to within a day or so, making the plausible assumption that Stu called on the first day he could each weekend. Stu was *also* home when Alden got dumped in the woods, though it could have been early or late in the weekend, so the date of Alden's homecoming can likewise be deduced to within a couple days.

This landmark is used to set dates for the majority of Alden's time in the HOME and ADMISSION sections of the timeline.

[38] The first match of the night was Cottontail v. Febri/Shrike (ch. 125), followed by back to back matches for team Finlay/Tuyet/Jupiter (ch. 127), and Jacob called Maricel just before the final match of Cottontail v. Vandy/Marsha. As gym period runs 5-7 pm (ch. 82), this means around 6:30 pm. In ch. 129, we learn Jacob made the call just after he set out.

[39] Sleyca confirmed in ch. 147 comments that the events of 147-148 are internally chronological, but this leaves some room for interpretation as consecutively presented scenes may be overlapping or simultaneous. A Global Advisory notice was sent out in ch 132 a few minutes after the initial alerts, and Skiff does not see that advisory before being emergency summoned, so his summons must have hit almost immediately after the Submerger broke despite his segment occurring after the Robertses'. Yesenia was in the same working group as Jeffy and apparently partnered with him, so was likely summoned at a similar time.
Partial quote from Sleyca: "I decided to make this chapter and the next internally chronological, so we have Jacob's parents in the time period after he stopped texting his mother but before the boat has struck the Matadero barrier starting us off."
Scene order in 147-148: Jacob's dad/Wilbert/Polly, Cyril, Annalise/Bird, the Robertses, Skiff, Jeffy, gossiping professors, Stu/Joe, Elias/Archibald, Winston/Finlay, Connie/Rynez-yt, the fluffle, the Span, Lute.

[40] Sirens went off immediately when the Submerger struck Matadero (ch. 135) at 12:27 AM. At that point the bus was just shy of the middle of the Span, a little over 4 km from the north/Apex end (ch. 132). Some time was spent on deciding and organizing a run towards Apex. Alden ran half the distance (~2 km) before being assigned a teleport timer of nine minutes, then dealt with a few incidents on his way north and was teleported away before he could reach the end of the bridge. Altogether it seems he must have teleported at least 15 mins after the sirens went off, possibly up to 30.

[41] Due to the chronological arrangement of ch 147-148, we know that Joe headed to the Grand Senate before Connie was fetched by Rynez-yt. Given the very expeditious evacuation proceedings, Rynez-yt was probably dispatched almost immediately after Alden selected his plus two.

[42] Alden returned a great dane to an owner who had been walking "for over an hour" shortly before his final return to the ambassador's residence; interpret that as 1-1.5 hours since the sirens went off at 12:27 am (ch 135). Assume getting the dog took less than fifteen minutes. While retrieving the dog, the first warning that Punta de la Luna was being abandoned came in (ch 137).

[43] Haoyu told Alden in ch. 135 that he had to borrow a phone to send a message, so it's very likely his message to Alden and the one to Lute were sent within a few minutes of each other. Alden's message came in shortly after returning the dog to her owner.

[44] The timing on this event is very uncertain, but it seems plausible that it happened after Lute's talk with Vandy about his parents, as the revocation of teleport timers would have been major news relevant to that conversation.

[45] Alden estimates that the time between returning to the ambassador's residence after fetching the dog and the fight in the greenhouse was less than fifteen minutes.

	Alden searches for help. Alden breaks a door. Alden receives a calling card. Apogee Artist Spaces floods. Alden rescues Tiny Snake. Lute bestows from afar. Lute takes to the sky. [Ch 148][46] ~2-4 AM: Haoyu's shuttle departs. [Ch 132, 142][47] "How different will you be?" ~3:30-3:45 AM: Alden finds the bodies. [Ch 98, 135, 142][48] Probability of chaos exposure negligible. The water finds Alden. "The path of higher onus is more difficult than I knew." Alden invokes a privilege. Alden holds from afar. Esh catches a confused ryeh-b't. 5:19 AM: Daybreak.[49] ~8-8:30 AM: Sleep. [Ch 145][50] Ch 131-145, 147-148.
Su 11/18	Homework in an empty cube. Boe decatted.[51] Testimony given. The Informant's network speaks. Ch 145-146, 149-150.
M 11/19	Alden's birth tree employed.[52] The Bald General makes the news. Ch 150…

[46] Lute had some time to wander around the gym and sort out some insights about his targeting before he got a message about Cyril and then ran out to the Span. Call it about an hour since he sent his original round of messages.

[47] Another event with very uncertain timing. Haoyu's message to Alden suggests he teleported after Kon but before Lexi and the bulk of the class, so assume his timer was ~25 mins, comparable to Dee's (ch 132), 15 mins longer than Alden's. It was "quite a while" between Haoyu being teleported and the shuttle's takeoff (ch 142); interpret that as between 30 minutes and three hours. This gives us a window of 1:30-4 am. Liftoff was after Punta de la Luna was taken by the ocean (ch 142), so no earlier than 2 am to allow Alden time to leave the neighborhood. Liftoff was likely before chaos chance was rendered negligible, as that may have called off the evacuation, but this does not restrict the window.

[48] Peace of Mind lasts three hours, four minutes, eleven seconds (ch 98). Alden cast Peace of Mind less than fifteen minutes after the sirens going off at 12:27 am (ch 135). Peace of Mind wears off about the time Alden finds the bodies (ch 142), placing that event at ~3:30-3:45 am.

[49] Anesidora is in the Pacific time zone which is UTC -8 by default. If we stick to PST, though, sunrise comes at 4:19 am, which leaves 35-50 mins to hold, in sequence, four or more disaster updates, a run through an urban maze, a flash flood (ch 142), a search for warm dry clothes, a wait for water to recede, a slow retreat to the roof, and a rescue still before first light (ch 143). That seems too crowded to be plausible. If we assume Anesidora is on daylight savings time in its summer (Sep-Mar), though, the time zone is currently PDT (UTC -7) and sunrise is at 5:19 am, allowing those events more than twice as much time to unfold.

[50] Alden slept for about fifteen hours, woke briefly once for treatment, spent a while taking stock, and checked the time around 11:30 pm.

[51] Alden's testimony about Zeridee ended at dawn, ~5:20 am. He probably spent a couple hours after that writing his essay in ch 149. He speaks to Boe in 150 after that, spends hours contacting people and watching the news, then falls asleep at 9 pm. Make a guess that Boe was contacted shortly after Alden got call privileges and left Esh-erdi's presence. Boe says he left intake "a few hours ago" (~3-6 hours), which means Boe may have gotten out before or after the conversation with Esh-erdi but likely before, and almost certainly on Sunday.

[52] Alden slept at 9 pm and was woken 6 hours later to have his hand healed.

[53] In ch. 91 on 11/2, Haoyu's dad had left for Matadero "a couple nights ago" and most demon-slayers stay in residence on Matadero "a few weeks". Interpret "a few" as "six or fewer".

[54] I make the assumption that the time it takes for Alis' cleanup to reach the lab, at the epicenter of the chaos outbreak, represents one half to one fourth of the total cleanup time. Time required to instantiate a new Contract Thegund *after* that is not included in this estimate.

[55] Earth is obligated to kill "one or two" demons a year, but Demon Day is described as a semiannual event (ch 16). Possibly this means that a slot is reserved for Demon Day twice a year but is not always employed for a demon battle; Esh-erdi's perspective in ch. 131 suggests this may be the case. For now, assume Demon Day happens every six months.

[62]

[56] Anesidora schools run year-round and typically anticipate that students take one quarter off per year (ch 69). I made the assumption that Alden's partial starting quarter counts as a full one for the purpose of determining when his break is.

[57] Alis says it will be "several more months" until Contract Thegund is rebuilt. Make a guess that she means several months after the corruption cleanup finishes, and that several Artonan months is close to five Earth months.

[58] Aulia was re-elected in 2038 before July 19 (ch 111). Aulia lost her council seat, most likely due to losing an election (but possibly via other proceedings), in 2040 while Alden was off-world, so Feb or later (ch 82). Elections are likely held during Feb-July on a two year cadence.

[59] "Wizards my age don't usually gain provisional summoning rights for another four years," according to Stu. Assume those are four Artonan years, so roughly five earth years. Stu could be a special case as a future knight, but for now, assume that he is not.

Note that if Stu is age 17-equivalent when met, then he gets his rights at about 28 earth years old, or roughly age 21-equivalent.

[60] Assume Bti-qwol's graduation timeline of eight Artonan years is typical. One Artonan year is about 15 Earth months.

[61] Accept Alden's estimate that Kibby is age 8-equivalent. Apply age conversion factor. Use estimate from Stu's case that summoning rights begin at roughly 28 earth years old.

[62] Highly likely, but not temporally located, future events: Alden re-records a Kibby message, honeymoon knights socialize, hero funeral happens on campus, Boe returns, Max and Heloísa call in their power uses, chicken café visit, Alden meets gym repair wizards, Arjun guest lectures.

Todo: Check on Thegund day cycle.
