[1] "Nearly two thousand years ago, the first version of the Contract was designed" according to Joe, followed immediately by a discussion of the original Avowed skills. Possibly the Artona I Contract preceded the first interspecies Contract, but the language seems to imply they were roughly contemporary, part of the same overarching project.

[2] Lunervikk is a famous avowed Wright "from over a century ago", according to Contract III's translation of Met-oosa's words. Assume "century" means one hundred Artonan years.

[3] An Artonan year is roughly fifteen earth months, so one hundred Artonan years is roughly 125 earth years.

[4] Joe claims, "We haven't blown anything up too badly in my lifetime."

[5] Joe sat on the committee that put the Hot Lab Coat in the Wardrobe "decades ago"; that was likely a desirable position he could not have gained without some clout, so he's probably at least 60.

[6] Joe summoned humans before he was conspicuously tattooed, when he had "just earned the right to summon Avowed". Summoning rights are typically first gained around 28 earth-years of age (ch 70; see further notes on Stu's projected summoning rights in 2045). It's unlikely Joe was born more than 40 years before Contract Earth was formed.

[7] Ch. 88's mention of a volcanic eruption in Bali during 1963 matches up to the eruption of Mt. Agung in our timeline. However, it does not nail the date down with much precision, as the Agung eruption was a multiple-stage event spread out from initial activity on Feb 18 to a final eruption on May 16. While there were lava flows Feb 24-Mar 16 and they did reach populated areas, they were not the fast-moving torrent of flame Alden described seeing in museums; most deaths were caused by pockets of hot gas flowing from the volcano. Regardless, Tan-wyk's intervention must have happened during the twenty day period of active lava flows, likely in the latter half as enough damage had already been done to the area to justify staying to help rebuild for the following year.

[8] Neha's selection age is not explicitly given in ch. 111, but she's listed alongside early outlier selectees.

11/13/1970 CE	Benjamin Velra born. [Ch 120]
~1980 CE	Aulia contracts with Horatio, S-Healer. [Ch 112]

~2018 CE	Iella-inwer falsifies her teleport destination. [Ch 163][15] Stu-art'h born. [Ch 38, 70, 103, 107, 162][16]

~2023-2025 CE	Stu-art'h rescued from a loving lie.[17]

---

[9] "When [Aulia] was my age she'd already had her first child [Corin].'' – Hazel, at age 17 (ch 121). Aulia stopped going to school at age 15 (ch. 110), so was likely selected at 15. She was one of the original Avowed, so probably selected around 1964.

[10] According to Esh-erdi, Zeridee is twice Alden's age or a few years more. Assume he means chronological age rather than developmental age, and allow five earth years leeway.

[11] Approximate birthdate according to 7/6/23 Patreon Q&A. Partial quote: "Hannah would have be in in her mid-thirties now at least. I've been picturing her about 35."

[12] Alden's initial estimate (ch 26) is that Manon is about 50 years old. We know from ch. 101 she is at least 50. She affixed "thirty-something years ago" (ch 32), so 2000 at earliest. Assume she affixed when 15-17 years old, so 2007 at latest.

[13] Alden estimates Stu is equivalent to 12-13 and Sina is equivalent to 18-19 in the ch 59 flashback. Accept Stu as 12 and Sina as 18. Apply age conversion factor from ch 107.

[14] Manon has been working the LeafSong admissions week for 23 years, according to a boater. The admissions week happens once per Artonan year or every 15 months, placing her original summons closer to 22.5 years ago.

[15] Iella was pregnant with Stu when she left the planet but not far enough along to show (ch 163), so assuming Artonan pregnancies follow a similar timeline to human pregnancies this occurred several months before Stu's birth.

[16] Alis says in ch. 38 that Alden is younger than Stuart; assume she means developmental age, not chronological age. Stu says in ch. 70 that he started college early. If Artonan college starts at roughly the same maturity level as human college, with students most commonly 18 years old at entrance, this suggests Stu is equivalent to a 16- or 17-year-old human when met.

There is some possibility that Stu is younger than this; Alden claims in 103 that Stu is younger than him maturity-wise, though in context it appears to be immediate petty revenge for Stu not telling Alden he'd received messages intended for Lute. In ch 162 Alden walks the statement back, though, which may indicate he meant it seriously originally. However, I'm inclined to give Alis' statement more weight overall, as she actually knows Stu's age and Alden doesn't. In the end, I'm placing his estimated maturity when met as equivalent to a human 16-year-old.

A sixteen-earth-years-old Artonan is developmentally similar to a twelve-year-old human (ch. 107). I assume this ratio holds constant through all stages of youth and young adulthood, at least.

	Ch. 163 flashbacks.
~2023 CE	Connie leaves home. [Ch 65] Joe begins working on Moon Thegund. [Ch 28]
2023 CE	2/23/2023: Hazel Dinah Velra born. [Ch 111][18] ~Oct: Roman Velra born. [Ch 111, 112][19] ~11/28-12/5/2023: Max born. [Ch 94, 216][20] ~Dec: Jeremy Levi born. [Ch 64]

---

[17] The context cues in text are sparse and distorted, but Stu seems to have been developmentally equivalent to a four- or five-year-old human when he was rescued. That would make him about 5-7 earth years old at the time (ch 107).

[18] Hazel's 14th birthday party was on 2/23/2037. The chance the party is on a different day than her actual birthday is low, as this falls on a Monday.

[19] Roman is eight months younger than Hazel (ch 112). Hazel was born 2/23/23 (ch 111).

[20] In ch 94, on 11/3/2040, Lexi says Max turns 17 in "a month"; in ch 216, on 12/5/2040, Max is revealed to be 17 years old.

[21] From Sleyca's comments rather than the story itself; not yet established in text.
Partial quote from Sleyca (in Patreon comments section here on ch. 120):
"Haoyu doesn't have an official birthday yet even though he deserves one more than most, but I have him being a month or two younger than Lute in my head."

[22] Alden provides multiple estimates of Kibby's effective age. I used the estimate in ch. 46 that she is equivalent to an eight-year-old, as it comes later and is probably based on more complete knowledge. Apply age conversion factor from ch. 107.

[23] Assuming the show runs weekly with no skipped days.

[24] Hannah quotes speculation he was selected "a few months" before the incident, so ~2-6 months prior.

[25] Sophie has been working the LeafSong admissions week for about 7 earth years. The admissions week happens once per Artonan year or every 15 months, placing her original summons closer to 7.5 years ago.

	Leah and Richard Thorn killed. Ch. 1. Oct-Dec: Hannah visits Alden. Connie, 25 years old, becomes Alden's guardian. [Ch 2, 65] Ch. 2.

2037 CE	M 2/23/2037: Hazel's (first) coming-of-age party. [Ch 110] ~Jun-Aug: Hannah speculates that Alden has high chaos potential. [Ch 6]
2038 CE	Feb-July: Aulia Velra re-elected. [Ch 82, 111][28] Th 5/27/2038: Leeter-zis begins a life as a professional celebrant. [Ch 223][29] ~Aug-Sep: Alden Thorn and Jeremy Levi meet in 9th grade. [Ch 5] Dec: The Dice Incident at Nilama Paragon Academy. [Ch 111]
~2038-2039	Kibby gets wizard lessons. [Ch 46][30]
Dec 2038-Nov 39 CE	Joe's lab confiscated. [Ch 28][31]
2039 CE	Early March: Roman Velra selected. [Ch 112]

---

[26] Hannah says in ch. 2 that the club Body Drainer hit was having an early Halloween party, placing the month as October with high confidence.

[27] Assume Stu is age 16 equivalent when met. Assume Stu is age 12 equivalent in flashback. Apply age conversion factor.

[28] Aulia was re-elected in 2038 before July 19 (ch 111). Aulia lost her council seat, most likely due to losing an election (but possibly via other proceedings), in 2040 while Alden was off-world, so Feb or later (ch 82). Elections are likely held during Feb-July.

[29] 12/6/2040 is his 854th consecutive day celebrating. He began 853 Artonan days prior, so 924 earth days.

[30] Kibby is implied to have gotten her magic lessons when she was about seven, based on Alden's musings. Assuming he means developmental age seven, and comparing against her developmental age when met of about eight, that puts the date ~2038-2039.

[31] Joe's lab was confiscated "several lunar months" before he met Alden (ch 28). It's unclear which moon he is referring to or how long its month is; it may be Thegund, with months approx. 60 days long if it is a tidally locked moon, as it appears to be. This statement offers little solid information.

However, it's reasonable to assume that whatever month Joe is referring to is at least a few times larger than a week, or he'd likely use weeks as the unit. Choose four Earth months as the lower bound, as an earth month is roughly equal to 4 Earth weeks or 2.5 Artonan weeks.

Additionally, we know this is Joe's first year back teaching again, both from his own statements ("I haven't taught in three decades," ch 26) and from Sophie's ("This professor is unknown to me," ch 26). We can then reasonably assume his lab was confiscated less than one Artonan year ago, as teaching is part of Joe's sentence.

	M 6/20/2039: Lute Velra selected. [Ch 112] F 6/24/2039: Lute makes a trade. [Ch 113] M 6/27/2039: Lute makes an announcement. [Ch 113] ~Sa 7/2/2039: Lute gets a tattoo. [Ch 114] ~M 7/4/2039: Lute Velra affixes Chainer. [Ch 114] ~May-Aug: Sina Stu-art'h announces intent to become a knight. [Ch 162][32] ~June-July: Hannah summoned. [Ch 5] ~June-Nov: Chaos levels on Thegund begin a rapid rise. [Ch 30] Oct: Alden posts a pic of perfect pigeons, then ghosts his socials. [Ch 124] Selection - 88 (F 11/11 or F 11/18): Hazel Velra selected. [Ch 12[33], 23]
~Dec 2039-Jan 40 CE	Lab crew on Thegund request evacuation. [Ch 30] Yipalck employees evacuated; Joe loyalists left behind.
Early 2040 CE	Alden feeds a receptionist. Ch. 5-7.
~Selection- 5-14	Andrzej selected. [Ch 15]
Selection -5 or -12 **Sa 2/4 or 2/11**	Connie goes to California with Tiger Shorts. Alden makes eye contact. Ch. 8-9.[34]
Selection -4 or -11 **Su 2/5 or 2/12**	Alden donates blood. Alden explores dietary veganism. Gorgon starts scheming. Ch. 9-11.
SELECTION **Th 2/9 or 2/16**	Aulia Velra casts the Gloss. [Ch 21][35] 1 PM: Alden selected. Gorgon drops a hint. Ch. 12-14.

[32] Stuart announced "about half a year" before he met Alden. An Artonan year is about fifteen earth months long, so ~6-9 months before meeting Alden at LeafSong.

[33] Affixation timer is exactly 90 days.

[34] These events are described in ch. 8 as "ten days until the funeral", but take place on the same day as consulate wordchain class, which is established as happening on weekends. Additionally, this is confirmed to be a Saturday in the opening lines of ch. 10. As the funeral is also on a Saturday, this must actually be 7 or 14 days prior to the funeral. Furthermore, this is in February (ch. 8), which may further restrict the date once Sleyca does an edit pass that affects calendar dates early in the story (see footnote on funeral for further information).

[35] The Gloss was almost certainly cast Thursday, but may have happened before or after Alden's selection. In ch. 21, on Saturday, Aimi says it was cast "two days ago". In ch. 22, Keiko says that B Chainer appeared in class trades from Chicago "just after" the Gloss was set; as Alden obtained Chainer about 16 hours after selection, this suggests the Gloss may have happened after his selection.

However, the Gloss more likely happened first. Andrzej had been selected with Chainer the week before, prior to the Gloss cast, but was unwilling to sell to the Velras and possibly afraid to even let his uncle know he held Chainer, lest his uncle strongarm him into affixing it himself. After a week, during the Gloss, Andrzej manages to get to the consulate and try trading, and there sits the perfect class for him the *very minute* he logs on.

Meanwhile, Alden was selected about six to eight months early according to Gorgon, the most knowledgeable available source on the subject (ch. 13), at exactly the right time to get Meister of Cudgel. He walked out of a "no child unaccounted for" school through a conveniently propped-open door without any adults noticing (ch. 12). He was awake at an odd hour, adequately prepared to trade, and online without B74's (or the Velras') competition when Andrzej's B Chainer trade offer appeared on the exchange – and holding nearly the exact thing asked in turn. He then had enough time to research Chainer and decide to contact the Velras before he made his scheduled visit to Anesidora the following day, completing the delivery in the nick of time.

F sel+1	Alden meets Andrzej. Skiff lurks by the consulate. Connie returns. Ch. 15-17, 19.[36]
Sa sel+2 **2/13 [ch 5]** **2/11 or 2/18**	Hannah Elber's birthday.[37] 10 AM: Alden teleports. Alden gets kidnapped. Alden meets Aimi, Keiko, Lute, and Hazel Velra, plus Gemma Elber. Alden and Hazel trade. Hazel Velra affixes Chainer. Ch. 19-24.

Summons+5A,6A	Day 6-7. Ch. 37. Jeneth gives Stu his blessing. [Ch 37, 162][40]

---

[36] Ch. 15 calls this Saturday in the opening sentence. It's the day after Alden was selected on Thursday, so it's actually Friday. Also, Boe skips school to hang out with Alden in chapter 16, so this must be a school day.

[37] Hannah's funeral is noted to be on her birthday, 2/13, in chapter 5. Tracking the events in the story reveals this is a Saturday.

However, Sleyca decided at a later date that the starting year of the main story (ch. 5 onwards) was 2040. 2/13 does not fall on Saturday in 2040. In cases of conflict throughout the timeline, I give stated day of the week precedence over stated date as "Thursday vs. Saturday" usually has a greater influence on human behavior than "May 11 vs. May 13." This is the reason for the doubled dates throughout the SELECTION, SUMMON, and CHAOS segments of the timeline.

Full quote from Sleyca (in Patreon comments section here on ch. 99):

"It's officially 2040 moving forward. I was fuzzy on the precise year and not anticipating anyone to care enough to check me on it (you are dedicated!) until a few months ago, when I started mapping at Anesidoran holidays and Stuart's phone calls. I picked the 2040 calendar, which should match everything from the LeafSong arc forward. I do need to go back and fix some dates in the early story."

[38] Alden passed out for sixteen hours and woke up at 2 AM.

[39] This day begins on the "fifth morning" of Alden's stay at LeafSong, so properly speaking it should be Summons+5A or Day 6. However, the following day is assigned the moniker Day 6 in ch 37. Call this Day 5 and move on.

[40] Stuart was injured on day 5 at LeafSong and Stu told Alden his dad wanted to meet on the morning of day 8. Assuming Stu was knocked out and recovering after major magical surgery the day of his injury, that leaves day 6 or 7 to hold the long conversation he had with his dad and described in ch 162.

Summons+7A	Day 8. Laura injured. Ch. 37.
Summons+8A	Day 9. Alden loaned a ring. Alden attends a party. Alden holds hands. Ch. 37-38.

~Chaos+60-90 **~May-June 2040 CE**	Alden's funeral. [Ch 62, 64][43] Jeremy buys a Yellowstone poster. [Ch 64]

[41] An Artonan day is approximately 26 hours long. During the Summons segment, while Alden is on an Artonan schedule, I note times like "+9A" to indicate nine *Artonan* days after summoning, and "+10E" to indicate ten earth days after summoning.
[42] Interpret "several months" as ~150 earth days.
[43] Ch. 62 says the funeral happened "a couple months" (~60 days) after Alden's disappearance, but Jeremy says Boe punched his wall "a few months ago" (~90 days ago) a week and a half after the funeral "right before summer break" (prob. May or June).

~Chaos+60-200 **~May-Sep 2040 CE**	The Primary leaves for a long-delayed campaign. [Ch 161][44]

Chaos+191?	Alis' vacation interrupted.[47]

[44] In ch 161 on 11/20/40, Stuart says his dad has been away "for months". Interpret that as 2-6 earth months.

[45] From stated days and lighting conditions, it appears that Thegund has a day-cycle roughly 60 earth days long. Everything after the collapse of Contract Thegund is more or less consistent with 30 days of light alternating with 30 days of darkness. However, this does *not* match the fact that it was apparently day on Thegund when Alden first traveled there. This may be author error and/or artistic license.

[46] Alden spent three wakeful periods, two full sleeps, and unknown fraction of a third sleep between the lab blowing up and the start of his run. This includes time pacing outside the crater, hoping for rescue. His first sleep was 10-11 hours long according to Kibby, who appears to have excellent time sense, so these "days" may be longer than 24 hours. Call it three days from explosion to run.

[47] Length of run approximated by noting that Alis did three shifts of triforming over the course of the run. Once her strikes disturbed the sand, but were silent; once they were audible; once Alden was so close he was running through dust clouds, during the final leg

of the journey when he felt no pain. Alden thought he had not been running a full day when he first noticed the vibrations. Alis was at the start of her day when Alden arrived. The length of the run was probably about three full Artonan days.

[48] Stu's calls come about thirteen earth days apart [ch. 70] because an Artonan week is approximately that long. Stu can only call Alden when he's home on the weekends and can enlist his sister's help. The call on Nov. 6 is noted in ch. 89 to be Stu's 5th call, so the dates of earlier calls can be deduced to within a day or so, making the plausible assumption that Stu called on the first day he could each weekend. Stu was *also* home when Alden got dumped in the woods, though it could have been early or late in the weekend, so the date of Alden's homecoming can likewise be deduced to within a couple days.

This landmark is used to set dates for the majority of Alden's time in the HOME and ADMISSION sections of the timeline.

[52] The first match of the night was Cottontail v. Febri/Shrike (ch. 125), followed by back to back matches for team Finlay/Tuyet/Jupiter (ch. 127), and Jacob called Maricel just before the final match of Cottontail v. Vandy/Marsha. As gym period runs 5-7 pm (ch. 82), this means around 6:30 pm. In ch. 129, we learn Jacob made the call just after he set out.

[53] Sleyca confirmed in ch. 147 comments that the events of 147-148 are internally chronological, but this leaves some room for interpretation as consecutively presented scenes may be overlapping or simultaneous. A Global Advisory notice was sent out in ch 132 a few minutes after the initial alerts, and Skiff does not see that advisory before being emergency summoned, so his summons must have hit almost immediately after the Submerger broke despite his segment occurring after the Robertses'. Yesenia was in the same working group as Jeffy and apparently partnered with him, so was likely summoned at a similar time.
Partial quote from Sleyca: "I decided to make this chapter and the next internally chronological, so we have Jacob's parents in the time period after he stopped texting his mother but before the boat has struck the Matadero barrier starting us off."
Scene order in 147-148: Jacob's dad/Wilbert/Polly, Cyril, Annalise/Bird, the Robertses, Skiff, Jeffy, gossiping professors, Stu/Joe, Elias/Archibald, Winston/Finlay, Connie/Rynez-yt, the fluffle, the Span, Lute.

[54] Sirens went off immediately when the Submerger struck Matadero (ch. 135) at 12:27 AM. At that point the bus was just shy of the middle of the Span, a little over 4 km from the north/Apex end (ch. 132). Some time was spent on deciding and organizing a run towards Apex. Alden ran half the distance (~2 km) before being assigned a teleport timer of nine minutes, then dealt with a few incidents on his way north and was teleported away before he could reach the end of the bridge. Altogether it seems he must have teleported at least 15 mins after the sirens went off, possibly up to 30.

[55] Due to the chronological arrangement of ch 147-148, we know that Joe headed to the Grand Senate before Connie was fetched by Rynez-yt. Given the very expeditious evacuation proceedings, Rynez-yt was probably dispatched almost immediately after Alden selected his plus two.

[56] Alden returned a great dane to an owner who had been walking "for over an hour" shortly before his final return to the ambassador's residence; interpret that as 1-1.5 hours since the sirens went off at 12:27 am (ch 135). Assume getting the dog took less than fifteen minutes. While retrieving the dog, the first warning that Punta de la Luna was being abandoned came in (ch 137).

[57] Haoyu told Alden in ch 135 that he had to borrow a phone to send a message, so it's very likely his message to Alden and the one to Lute were sent within a few minutes of each other. Alden's message came in shortly after returning the dog to her owner. Additionally, Lute says in ch 141 that it was over an hour between his last internet access and getting into the gym; adding on some time to find Vandy's calling service, the timeframes line up well.

[58] The timing on this event is very uncertain, but it seems plausible that it happened after Lute's talk with Vandy about his parents, as the revocation of teleport timers would have been major news relevant to that conversation.

	Flyer departs. Alden searches for help. Alden breaks a door. Alden receives a calling card. Apogee Artist Spaces floods. Alden rescues Tiny Snake. Lute bestows from afar. Lute takes to the sky. [Ch 148][60] ~2-4 AM: Haoyu's shuttle departs. [Ch 132, 142][61] "How different will you be?" ~3:30-3:45 AM: Alden finds the bodies. [Ch 98, 135, 142][62] Probability of chaos exposure negligible. The water finds Alden. "The path of higher onus is more difficult than I knew." Alden invokes a privilege. Alden holds from afar. Esh catches a confused ryeh-b't. 5:19 AM: Daybreak.[63] ~8-8:30 AM: Sleep. [Ch 145][64] Ch 131-145, 147-148.
Su 11/18	Homework in an empty cube. Boe decatted.[65] Testimony given. The Informant's network speaks. Ch 145-146, 149-150.
M 11/19	Alden's birth tree journeys far.[66]

---

[59] Alden estimates that the time between returning to the ambassador's residence after fetching the dog and the fight in the greenhouse was less than fifteen minutes.

[60] Lute had some time to wander around the gym and sort out some insights about his targeting before he got a message about Cyril and then ran out to the Span. Call it about an hour since he sent his original round of messages.

[61] Another event with very uncertain timing. Haoyu's message to Alden suggests he teleported after Kon but before Lexi and the bulk of the class, so assume his timer was ~25 mins, comparable to Dee's (ch 132), 15 mins longer than Alden's. It was "quite a while" between Haoyu being teleported and the shuttle's takeoff (ch 142); interpret that as between 30 minutes and three hours. This gives us a window of 1:30-4 am. Liftoff was after Punta de la Luna was taken by the ocean (ch 142), so no earlier than 2 am to allow Alden time to leave the neighborhood. Liftoff was likely before chaos chance was rendered negligible, as that may have called off the evacuation, but this does not restrict the window.

[62] Peace of Mind lasts three hours, four minutes, eleven seconds (ch 98). Alden cast Peace of Mind less than fifteen minutes after the sirens going off at 12:27 am (ch 135). Peace of Mind wears off about the time Alden finds the bodies (ch 142), placing that event at ~3:30-3:45 am.

[63] Anesidora is in the Pacific time zone which is UTC -8 by default. If we stick to PST, though, sunrise comes at 4:19 am, which leaves 35-50 mins to hold, in sequence, four or more disaster updates, a run through an urban maze, a flash flood (ch 142), a search for warm dry clothes, a wait for water to recede, a slow retreat to the roof, and a rescue still before first light (ch 143). That seems too crowded to be plausible. If we assume Anesidora is on daylight savings time in its summer (Sep-Mar), though, the time zone is currently PDT (UTC -7) and sunrise is at 5:19 am, allowing those events more than twice as much time to unfold.

[64] Alden slept for about fifteen hours, woke briefly once for treatment, spent a while taking stock, and checked the time around 11:30 pm.

[65] Alden's testimony about Zeridee ended at dawn, ~5:20 am. He probably spent a couple hours after that writing his essay in ch 149. He speaks to Boe in 150 after that, spends hours contacting people and watching the news, then falls asleep at 9 pm. Make a guess that Boe was contacted shortly after Alden got call privileges and left Esh-erdi's presence. Boe says he left intake "a few hours ago" (~3-6 hours), which means Boe may have gotten out before or after the conversation with Esh-erdi but likely before, and almost certainly on Sunday.

[66] Alden slept at 9 pm Sunday and was woken 6 hours later to have his hand healed at 3 am Monday.

[73] I make the assumption that the time it takes for Alis' cleanup to reach the lab, at the epicenter of the chaos outbreak, represents one half to one fourth of the total cleanup time. Time required to instantiate a new Contract Thegund *after* that is not included in this estimate.

[74] The Earth Contract was agreed to in 1963 (ch 70), and operational in or before 1964, when we know Neha became an Avowed (ch 65). This means it took at most two earth years to create Contract Earth, providing a reasonable upper bound on when the new Contract Thegund is completed. However, it is entirely plausible that it is a much quicker process.

[75] Earth is obligated to kill "one or two" demons a year, but Demon Day is described as a semiannual event (ch 16). Possibly this means that a slot is reserved for Demon Day twice a year but is not always employed for a demon battle; Esh-erdi's perspective in ch. 131 suggests this may be the case. For now, assume Demon Day happens every six months.

[76] Half an Artonan year (7.5 earth months) from his original planned affixation date (12/19/40).

[77] Anesidora schools run year-round and typically anticipate that students take one quarter off per year (ch 69). I made the assumption that Alden's partial starting quarter counts as a full one for the purpose of determining when his break is.

[78] Alis says it will be "several more months" until Contract Thegund is rebuilt. Make a guess that she means several months after the corruption cleanup finishes, and that several Artonan months is close to five Earth months.

[79] Aulia was re-elected in 2038 before July 19 (ch 111). Aulia lost her council seat, most likely due to losing an election (but possibly via other proceedings), in 2040 while Alden was off-world, so Feb or later (ch 82). Elections are likely held during Feb-July on a two year cadence.

[80] "Wizards my age don't usually gain provisional summoning rights for another four years," according to Stu. Assume those are four Artonan years, so roughly five earth years. Stu could be a special case as a future knight, but for now, assume that he is not.

Note that if Stu is age 16-equivalent when met, then he gets his rights at about 27 earth years old, or roughly age 20-equivalent.

[81] In the ch 59 flashback, Stu's student group beginning their choosing season (ch 162), the youngest ones present at the event, looked about 12-13 years old, meaning they have a chronological age of about 16-17 (cf age conversion factor from ch 107). Kibby was born ~2029 (see notes on estimated birthdate in 2029; ch 46, 107).

~2050 CE	Stu graduates from LeafSong. [Ch 26][82]
~2052 CE	Kibby old enough to affix. [Ch 38, 46, 70, 107][83]
~2054 CE	Primary reevaluates Alden. [Ch 59] Lute reevaluates binocular vision. [Ch 188][84]
~2056 CE	Kibby gains provisional summoning rights. [Ch 46, 70, 107][85] Alden tat matches with the future Primary. [Ch 50]
~2300-2700	Earth's Avowed achieve world domination? [Ch 70][86]

[87]

[82] Assume Bti-qwol's graduation timeline of eight Artonan years is typical. One Artonan year is about 15 Earth months.

[83] Stu affixes in late 2040 at an estimated age of 23 earth years old (see notes on estimated birth date in 2017; ch 38, 70, 107). He is likely affixing at or near the youngest allowed age. Kibby was born ~2029 (see notes on estimated birth date in 2029; ch 46, 107).

[84] According to MBF, the Oracle at Sānjiǎo.

[85] Accept Alden's estimate that Kibby is age 8-equivalent. Apply age conversion factor. Use estimate from Stu's case that summoning rights begin at roughly 27 earth years old.

[86] Stu says in ch 70 that other resource worlds have taken "a few centuries" (assume 300-600 Artonan years, so 375-750 earth years) to take charge of their planets. He additionally notes that the percentage of humans that are Avowed is small (compared to other worlds, probably?), which implies it might take longer.

[87] Highly likely, but not temporally located, future events: Esh teaches Alden about mourning names, Esh tattoos Alden to Matadero secrecy, Heloísa calls in her power use, chicken café visit, Arjun guest lectures, hero funeral on campus.

Todo: Check on Thegund day cycle.
